no limits-no gaps

# HOSPITAL

a new dawn for Health Services

## Until Now

Up until now a patient receives medical treatment only after they go through the hospital doors. In our minds, treating a patient equals a doctor's capabilities. The treatment ends when a doctor has nothing left to offer.

Today, the most competitive health units have structured their Services according to the sum of their human resources (doctors, midwives, nurses, physical therapists etc) on the one hand and their facilities on the other.

## Now

From this day forth, health units that look into the future, deliver services by realizing the full potential of:

- Human Resources
- Technology and especially the internet

Not only inside the hospital but also outside

They build networks of services & have the capacity to treat a patient without "gaps".

# no limits to health services

## Give Services Remotely, with safety!

- Send Lab Results to a patient, after they leave the hospital and wherever they are, knowing that only they, can “open” the file.
- Send instructions for the patient's every day life, diets etc. on a regular basis and customized to each patient.
- Score a patient after surgery through questioners they can fill out from home.
- Prepare your patient, before surgery, by sending targeted instructions.
- Receive reliable results of biological assessments conducted by the patient themselves.
- Send messages concerning a patient's health.
- Send Reminders concerning a specific patient
- Send a copy of a patient's medical file, remotely.
- Build a service as a result of the sum of medical data that a patient can carry with them (i.e getting a second opinion)

# no gaps to health data

Give them the prospect, of a Personal Integrated Health File

- It is plug and play. It opens in every pc without any prerequisites.
- It can be operated anywhere in the world.
- It can be updated by any software that is part of the VIOS ecosystem.
- It can be updated by any health professional (Doctor, Pharmacist, diagnostic center), through VIOS mind (SaaS, free of charge).

*It gives its holder the possibility of carrying always and anywhere with them, their medical files and the doctor the possibility of reviewing quickly and reliably the patient's full medical history.*

# For Hospitals...

## Who wants to upgrade, their services to the patients?

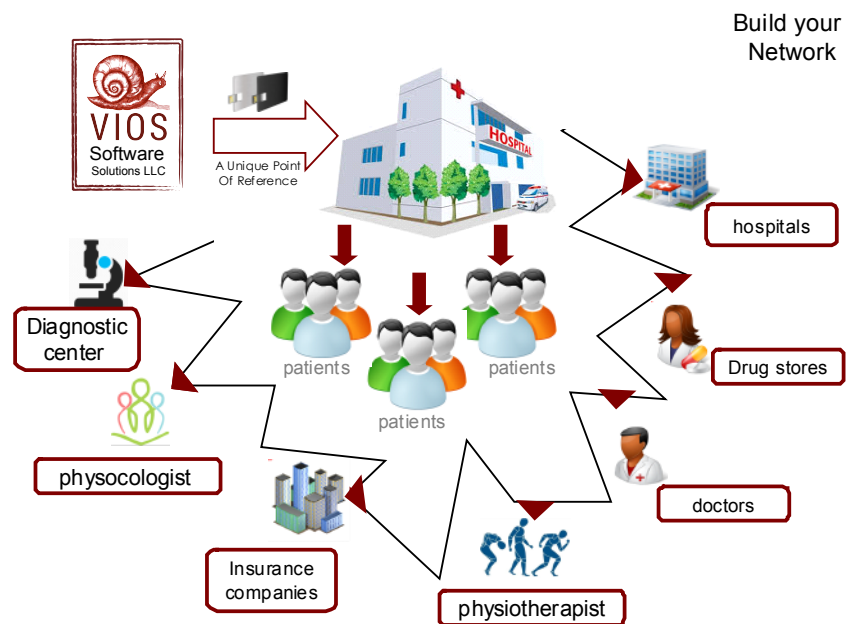

1. Register to the VIOS house, main server.
2. Get your credentials.
3. Download the API to connect your server to my-VIOS .
4. Develop the necessary connections to create the link between your server and my-VIOS .
5. Start entering the patient's data into your database .
6. Click send to transmit the information to the my-VIOS database.
7. Congratulations! You are now a member of the VIOS ecosystem!

**«Build» your own network of services,  
with my – VIOS as your point of reference!**

### Connect the Hospital with:

- Others, in different cities.
- Insurance Companies.
- Pharmacies.
- Diagnostic Centers
- Companies that deliver health services at home.
- Detox Centers.
- Psychiatrists.
- Dieticians

...and others!!!
